

The future is now

RFID : Radio Frequency Identification. All over the world, companies are getting ready to benefit from the revolutionary improvements brought to the supply chain and the consumer by this technology.

Through the use of electronic chips and radio waves, RFID can help manage shipments, inventories and assets, prevent products counterfeiting and medical errors, fight theft... and numerous other applications.

But for this to happen, hundreds of stakeholders around the world need to come together: retailers and producers, clients and suppliers, hardware and software

manufacturers, authorities...who would never be able to agree on a common solution without help.

GS1 EPCglobal is providing this help. It is devoted to leading the development of the RFID technology by defining and helping implementation of the standards that makes RFID operational across geographies, boundaries and sectors.

GS1 EPCglobal is a subsidiary of the GS1 standards organisation and as such, is present in 108 countries. Working not for profit, but for the benefit of the community.

At GS1, our vision is a world where things and related information move efficiently and securely for the benefit of businesses and improvement of peoples' lives, everyday, everywhere.

Our mission is to be the neutral leader enabling communities to develop and implement global standards providing the tools, trust and confidence needed to achieve our vision.
